

## Refunds without a customer?

Detect and report when a POS refund transaction is occurring without a customer being present.

Combine this feature with your exception reporting systems to examine suspicious refund transactions.

## Too much time in line?

POS, Customer Service stations or other locations within your store. Issue alarms to management when queue size exceeds acceptable levels.

## Want to know who comes & goes?

The SmartXi Trip Zone feature captures unauthorized activities at your facility. Alarm locally or notification to Central Monitoring Stations is performed in real-time.

## ClickIt can help!
